APPLICATION CIRCUIT

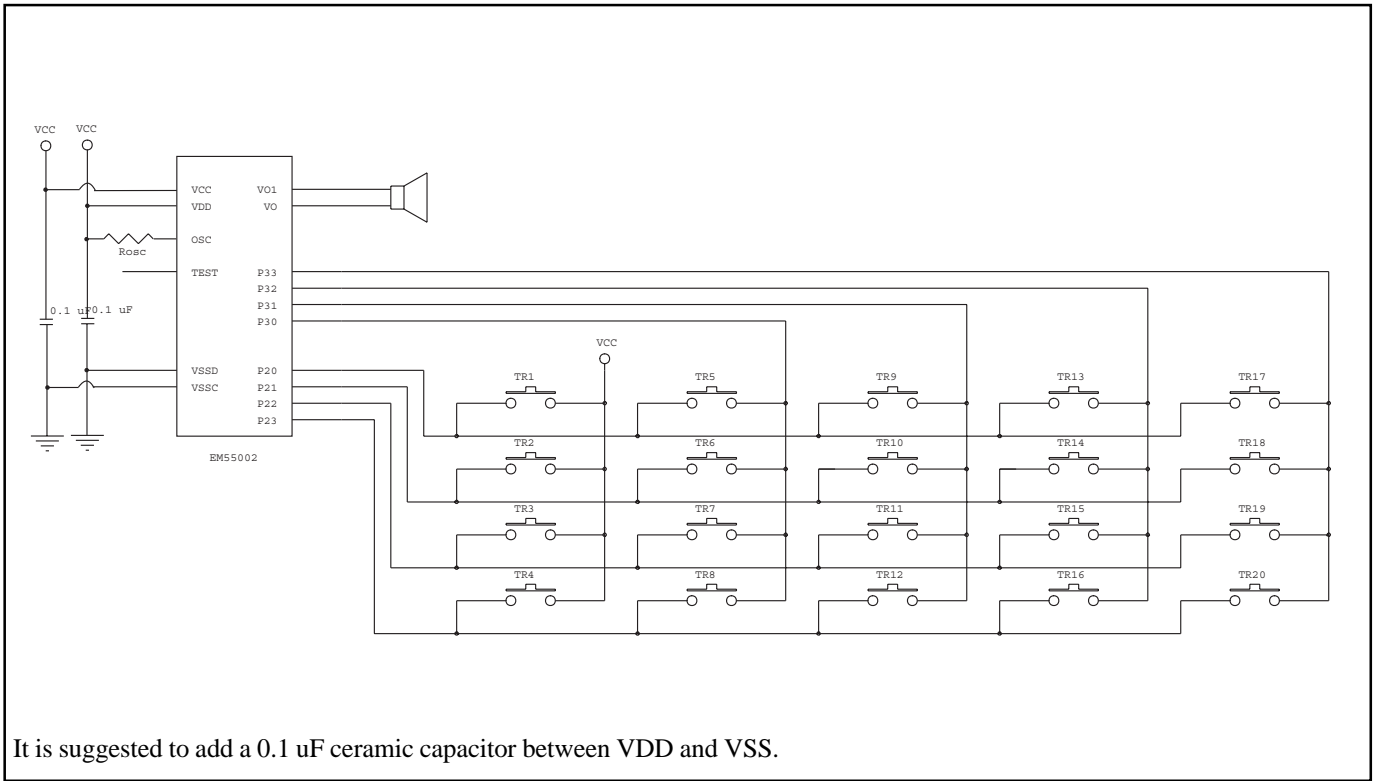

In the following application circuits:

- 1 : For noisy power supply application, suppress noise by adding ceramic capacitor between VCC and ground near the IC's VDD pad. The recommend capacitor value is $0.1\mu\text{F}$.
- 2 : For heavy loading application, it is recommended that an electrolytic capacitor is added between VCC and ground. The recommended capacitor value for button cell applications is $10\mu\text{F}$.
- 3 : The recommended value for button cell internal impedance is 750Ω or less.
- 4 : The use of spring direct trigger is not recommended. If you must use such trigger, you need to add a ceramic capacitor between trigger pin and ground to debounce the spring noise. The recommend capacitor value is $0.001 \sim 0.01 \mu\text{F}$.

6-key Application Circuit For EM55001

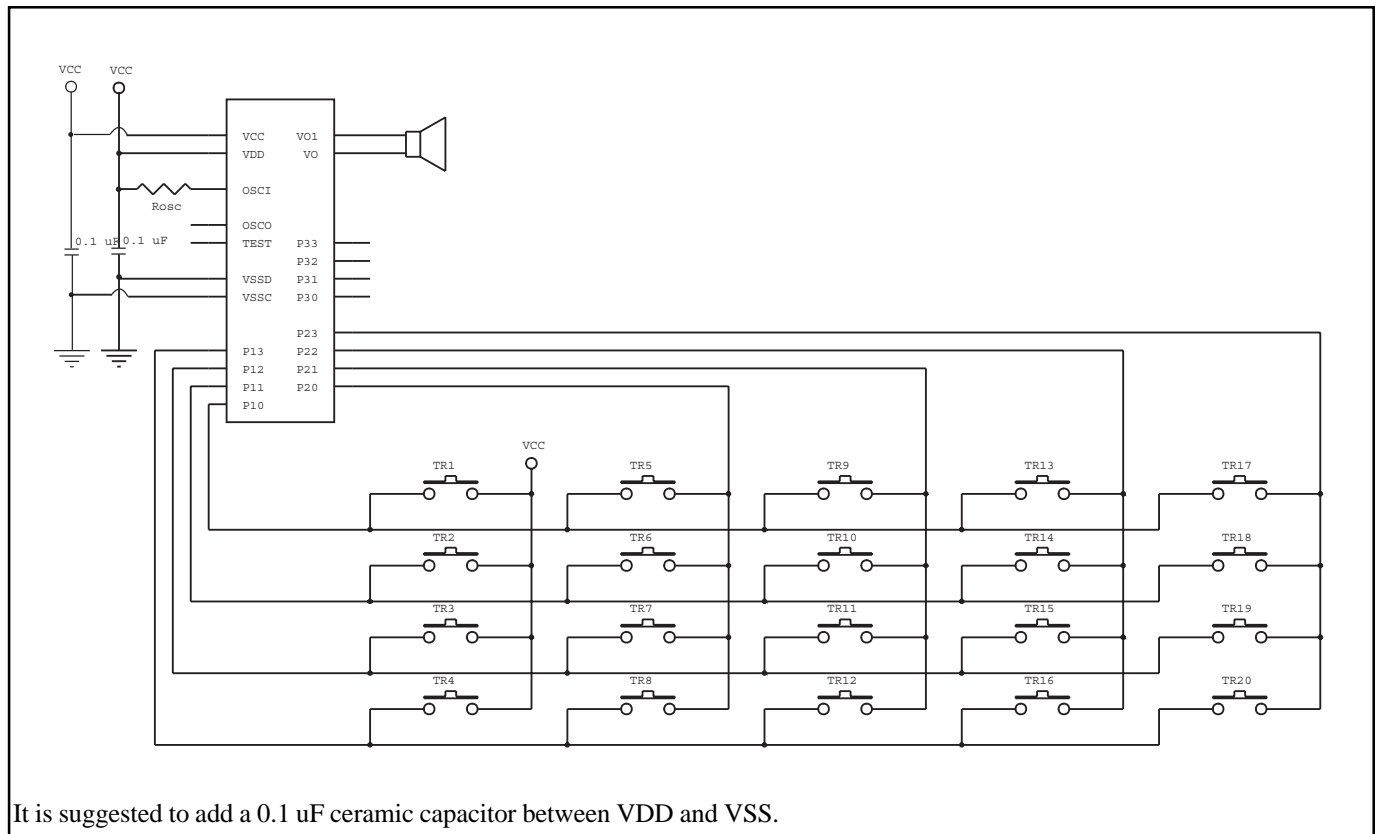

20-key Application Circuit For EM55002
